The Power of Play
Book by David Elkind

From Ms. Scibilia, BT Kindergarten

Loose parts play is an open-ended approach to learning that uses simple, everyday materials—like sticks, stones, fabric, cardboard, or recycled items—that students can move, combine, and explore in many different ways. When this kind of play takes place outdoors, it becomes even more powerful, giving children space to move freely, connect with nature, and engage their senses in a rich, dynamic environment.

The BT Den Creative Play Space will support a hands-on, student-centered learning experience where children are encouraged to follow their curiosity, test ideas, and collaborate. Through outdoor exploration and creation, students not only build and design but also experience the joy of discovery—finding excitement in their ideas, their surroundings, and in working together.

As they play and create, students naturally develop important skills like communication, problem-solving, and persistence. Over time, these experiences support student growth by fostering confidence, encouraging independence, and helping children make deeper connections in their learning. Most importantly, they cultivate a sense of joy in learning—where curiosity, creativity, and outdoor play come together in meaningful and memorable ways."
